Sentinel Visualizer Version 4.5 Released for Distribution

Link-analysis software adds integration with Google Earth

September 13, 2010 – Washington, D.C. – FMS, Inc., an In-Q-Tel portfolio company, has released Version 4.5 of its Sentinel Visualizer data visualization and link analysis software. Originally released in 2005, Sentinel Visualizer offers link charts, social network analysis, geospatial mapping, and the examination of timelines based on a user-customizable knowledgebase. The Professional and Premium Editions of Sentinel 4.5 now provide integration with Google Earth. Not only can locations be charted on the Google Earth maps, users can track-and-display the geographical movements of entities around the globe.

“By leveraging the power of Google Earth, Sentinel Visualizer helps analysts better understand their complex data relationships geographically,” says Luke Chung, President of FMS. “Based on Microsoft SQL Server, Sentinel Visualizer lets investigators find hidden relationships in their large data sets. With Google Earth integration, Sentinel Visualizer extends its existing geospatial features with the open architecture of Google to see dynamic movement.”

Sentinel Visualizer is in use by the intelligence community, law enforcement, and commercial organizations for diverse missions such as counter-terrorism, gang analysis, commercial fraud detection, human resource management, training, call center activity, politics, academic research, etc. With its link charts, hidden second- and third-order relationships among people, places, and things become instantly visible and understandable.

Sentinel Visualizer is offered in three versions: Standard, Professional, and Premium. In addition to the features listed above, Sentinel offers unlimited Entities, Relationships, and Metadata tags as well as a 3D Visualizer, gradient and de-clutter tools, data import tools, and a GUI relationship editor. Sentinel Visualizer version 4.5 supports all current Windows operating systems including Windows 7. Sentinel Visualizer does *not* require a dongle.

About FMS (<http://www.fmsasg.com>)

Established in 1986, FMS, Inc. is an award-winning software development firm specializing in database applications for decision makers. FMS software applications are used by commercial and government organizations with tens of thousands of customers in over 100 countries.

About Google Earth (<http://earth.google.com>)

Google Earth provides global satellite imagery and maps with dynamic ability to zoom and fly between locations. Google purchased the technology for Google Earth from Keyhole, another investment by In-Q-Tel.

About In-Q-Tel (<http://www.iqt.org>)

In-Q-Tel is the non-profit venture capital arm of the Central Intelligence Agency dedicated to bridging the gap between commercial technology and the needs of the intelligence community.
